

ABSTRACT

A remote control engine starting device includes an immobilizer and a remote engine starter for starting an engine when an engine start command is given from a remote location. The immobilizer further includes an interrogating signal outputting section, which outputs an interrogating signal when a signal related to engine starting is received, and an engine start permitting section, which gives engine start permission when a remote engine starter code that the remote engine starter outputs in response to the interrogating signal matches a remote engine starter verifying code preregistered in the immobilizer. The remote engine starter further includes an engine start signal outputting section, which outputs a signal related to engine starting, and a code outputting section, which in response to the interrogating signal, outputs the remote engine starter code preregistered in the remote engine starter.
